

n Recycled Material Content

Many Glasdon products are manufactured from recycled polymers to reduce demand for virgin material. At the end of their service life, virtually all Glasdon products may be recycled to produce new products. This makes Glasdon products extremely energy efficient.

Models such as Phoenix Seat and Enviro pol/Bollard are manufactured from 100% post-consumer waste. All Nexus 50 and Nexus 100 recycling bins now contain recycled content whilst many other products (when supplied in black colour) will contain almost 100% post-industrial waste. Glasdon is committed to increasing the proportion of recycled material in its products.

n Firepire

FIREXPiRE

is a fire extinguishing plate fitted within the bin top. Should a fire break out inside the bin, a special replaceable, heat responsive device releases the plate, which then seals off the mouth of the liner and snuffs out the fire through oxygen starvation. Replacement of the heat responsive device using only a screwdriver resets Firepire on site.

Firepire is an effective low cost auxiliary device and must never replace primary fire prevention measures. Obstructions preventing the plate from dropping may adversely affect the function of the unit and as many Firepire devices are used in unsupervised locations, regular inspection and immediate replacement of any damaged or distorted components is essential.

Stage 1
A burning match is carelessly discarded into a litter bin.

Stage 2
The fire takes hold.

Stage 3
In under a minute, the fire extinguishing plate drops onto the liner.

Stage 4
The fire is contained.
